# AppDynamics + ThousandEyes

ThousandEyes Digital Experience Monitoring and Internet Visibility, coupled with AppDynamics Application Performance Management (APM) is a winning combination that ensures complete application service delivery and minimal downtime. This focuses on ensuring that the delivery transit is not impacting application performance, and when it does, provide rapid drill down into the network root cause.

One Comprehensive Solution

The combination of AppDynamics + ThousandEyes provides end-to-end **visibility** of all data center, cloud, and hybrid applications. As well as **insight** to identify where network and internet issues are impacting application performance—allowing you to fill the operational gaps and silos between AppOps/SREs/IT Ops and Network Teams. The combined solution enables collaboration between oftentimes siloed teams, providing a single source of truth to alert and action on external or internal issues before users are impacted.

Internet → DNS/BGP → Path Visibility → Cloud & SaaS → API & Synthetics → App & Code → Server & Data Center → Cloud Native

ThousandEyes
Internet and Multi-Cloud Visibility

APPDYNAMICS part of Cisco
Application Performance Monitoring

Get End-to-End Visibility

- Integrate ThousandEyes Digital Experience and Internet Visibility with AppDynamics Application Performance Monitoring to get complete end-to-end visibility of all your data center, cloud, and hybrid applications.

- See performance from external user to the internet, to cloud and data center

- Provide real-world visibility from global vantage points

- Correlate application performance with Internet, cloud, and API issues.

Optimize Digital Experience

- Understand how cloud, SaaS, and API services impact the digital experience.

- Shift to more proactive monitoring, replicating realistic user journeys, while maintaining granularity of APM and instrumenting app.

- Identify where network and internet issues are impacting application performance.

Minimize Triage Time

- AppD and ThousandEyes also help fill the operational gaps and silos between SREs/IT Ops and Network Teams.

- Better visibility for faster root cause insight, reducing MTTR

- Alert and respond to external or internal issues before users impacted

- Get network, app, and ops teams on the same page

- AppD+ThousandEyes dramatically reduces MTTR by eliminating external and internal blind spots.

AppDynamics and ThousandEyes together provide a complete end-to-end solution. With our strong integration, we enable you to deliver a truly digital experience to your customers, while also ensuring network and IT teams spend less time and effort resolving issues.
